

# ***Excellence in Prevention*** – descriptions of the prevention programs and strategies with the greatest evidence of success

---

## **Name of Program/Strategy: Lower Levels of Alcohol in Beverages**

### **Report Contents**

1. Overview and description
  2. Implementation considerations (if available)
  3. Descriptive information
  4. Outcomes
  5. Cost effectiveness report (Washington State Institute of Public Policy – if available)
  6. Washington State results (from Performance Based Prevention System (PBPS) – if available)
  7. Who is using this program/strategy
  8. Study populations
  9. Quality of studies
  10. Readiness for Dissemination
  11. Costs (if available)
  12. Contacts for more information
- 

### **1. Overview and description**

Few studies of the specific effects of reduced-alcohol beverages on young people have been conducted.

### **2. Implementation considerations (if available)**

### **3. Descriptive information**

<b>Areas of Interest</b>	Substance abuse prevention
<b>Outcomes</b>	
<b>Outcome Categories</b>	Alcohol
<b>Ages</b>	

# ***Excellence in Prevention*** – descriptions of the prevention programs and strategies with the greatest evidence of success

---

<b>Gender</b>	Male Female
<b>Races/Ethnicities</b>	American Indian or Alaska Native Asian Black or African American Hispanic or Latino White Race/ethnicity unspecified
<b>Settings</b>	
<b>Geographic Locations</b>	Urban Suburban Rural and/or frontier Tribal
<b>Implementation History</b>	
<b>NIH Funding/CER Studies</b>	
<b>Adaptations</b>	
<b>Adverse Effects</b>	
<b>IOM Prevention Categories</b>	Universal

## **4. Outcomes**

### **Scientific Evidence**

Total alcohol consumption in Sweden was substantially higher when medium- strength beer could be purchased in grocery stores between 1965 and 1977, rather than only in state monopoly stores (Noval and Nilsson, 1984).

Students attending a fraternity party where only low-alcohol content drinks were served consumed the same number of drinks but had a lower blood alcohol concentration (BAC) than did students at parties where regular alcohol content beer and mixed drinks were served. The findings demonstrate the potential interaction between retail availability (low absolute alcohol drinks) with social availability (social events) (Geller, Kalsher, and Clark, 1991).

## **5. Cost effectiveness report (Washington State Institute of Public Policy – if available)**

# ***Excellence in Prevention*** – descriptions of the prevention programs and strategies with the greatest evidence of success

---

## **6. Washington State results (from Performance Based Prevention System (PBPS) – if available)**

## **7. Who is using this program/strategy**

<b>Washington Counties</b>	<b>Oregon Counties</b>

## **8. Study populations**

## **9. Quality of studies**

The documents below were reviewed for Quality of Research. The research point of contact can provide information regarding the studies reviewed and the availability of additional materials, including those from more recent studies that may have been conducted.
